

Hosting Performance Contest – November 2019 Roundup (15 Hosts Tested: Uptime Got Below The Surface)

Here's the 46th Monthly [Hosting Performance Contest](#) Roundup for November 2019! I've been testing 15 hosts in a non-stop manner the whole month and I'll show you the results below. The interesting observation is that several well-performing hosts got the uptime a bit below the highest standards which was not typical.

By the way, you can find the latest roundups [here](#) and the performance tables and charts [here](#).

All monitored hosts are presented in the pricing categories according to the most affordable plan they have. Also, I bought the most affordable plans available at each hosting company to test hosting performance.

Let's see how the hosts performed in November 2019!

 - [And here are the charts with the Hosting Performance Contest results in November 2019:](#)
- [November 2019 Hosting Performance Contest Results – Notes](#)
- [Conclusion](#)

Common Information

As you may already know, I've been monitoring the performance of some of the best hosting providers I know as well as some other well-known hosts.

In short, since 2013 I've been picking out great hosts judging by real users reviews, professional hosting community opinion, long honorable business experience and other factors which make a great hosting.

And I buy anonymously hosting accounts with different hosts in order to *closely monitor their performance* (basically, **uptime** checked *every minute* and **full page load time** checked *every 20 minutes*) using a professional monitoring service *monitis.com*. I buy **the most basic and the cheapest plan** of each hosting. You can read about my **monitoring methodology** [here](#).

And I'm happy to share these statistics with you so that you could see how these hosts perform and who is **the best from the best!**

You can find some **real-time performance charts** on my [recommended hosts page](#) for the hosting which I've been recommending and monitoring.

Also, you can see **real-time monitoring charts** for *all* hosts that I am monitoring on [this page](#). In addition, the page contains monthly **historical data** on hosting performance (*speed, uptime, satisfactory apdex*) – very interesting and useful.

Besides, you may read more information about this **Hosting Performance Contest** on [this page](#). I will be adding monthly and yearly Contest results on the page too.

And **other monthly Hosting Performance Contest roundups** are available from [here](#).

By the way, here's a disclosure: There are some affiliate links on this page. In other words, I get paid if you click on the links and make a purchase. All such links open in new window/tab;

no software/program will be installed to your computer. (This is a standard notice required by hosting companies.)

Please note that although all hosts mentioned in this post are well-established and considered to be very good, I highly recommend not all of them. My recommended hosts are [here](#).

November 2019 Hosting Performance Contest – Results

Here are the fifteen hosts that you can compare this month. I've broken down them in three groups: very affordable (below \$5/mo), middle class (upto \$8/mo) and more expensive (\$8+/mo).

- [SiteGround](#) (I recommend it, here's my [review](#))
- [GeekStorage](#) (I recommend it, here's my [review](#))
- [A2Hosting](#) (I recommend it, here's my [review](#))
- [VeeroTech](#) (I recommend it, here's my [review](#))
- [MDDHosting](#) (I recommend it, here's my [review](#))
- [HawkHost](#) (I recommend it, here's my [review](#))
- [Squidix](#) (I recommend it, here's my [review](#))
- [InMotionHosting](#)
- [StableHost](#)
- [HostWinds](#)
- [LunarPages](#)
- [MochaHost](#)
- [Eleven2](#)
- [GreenGeeks](#)
- [GlowHost](#)

You'll see a breakdown of hosting performance by prices in the sections below. Let's start from an overview of the hosting performance in the order of how the hosts performed in general *regardless* of how affordable or expensive the hosts are.

The **winner** of this month's contest is [SiteGround](#)!

In the Top-3 also go [MDD Hosting](#) and [GreenGeeks](#).

What's remarkable about the three winners this month is that there are no hosts from a middle price category – only the expensive and the affordable hosts won.

SiteGround took the 1st place. Its *full page load time* (1.06) seconds was amazingly fast. And its *uptime* (99.98%) was brilliant and much above the highest standards set for the greatest hosts (99.9%). My site was not available this month for just 8.6 minutes. As regards *Satisfactory Apdex*, it was amazing 99.95% which is above the benchmark level (99%) determined for the greatest hosts. The host surpassed the benchmark tests and thanks to the best speed it got the gold this month!

The silver medalist is **MDD Hosting**.

MDD Hosting performed wonderfully well and satisfied both benchmarks set for the greatest hosts. Its average *speed* was 1.25 seconds which is astonishingly fast. It was slower than the leader by just 0.19 seconds. And its *uptime* (99.92%) was simply perfect and much above the benchmark level (99.9%) set for the greatest hosts. My site hosted with this hosting was available all the time this month except 34.6 minutes. The host's *Satisfactory Apdex* (100%) was simply perfect and of course much above the highest standards (99%). And since this hosting was the second fastest host among the hosts which exceeded all the benchmarks determined for the greatest hosts **MDD Hosting** wins the silver medal.

The bronze medal goes to **GreenGeeks**.

Average *full page load time* **GreenGeeks** was 1.39 seconds (it's super fast). It was slower than the leader by 0.33 seconds. Its *Uptime* was almost perfect 99.99%. It's very much above the benchmark level set for the greatest hosts (99.9%). My site hosted with this host was available all the time during the whole month except 4.3 minutes. And the host's *Satisfactory Apdex* was very good 99.95% (i.e. 99.95% of the time during this month the full page load time was less than 2.5 seconds). It's much above the benchmark level (99%) set for the greatest hosts. Since all these parameters are above the benchmarks specified for the greatest hosting performance and this hosting was the third fastest host among the hosts which exceeded all the benchmarks determined for the greatest hosts **GreenGeeks** wins the bronze medal.

StableHost took the 4th place. The host performed in this month as fast as 1.42 seconds which is impressively fast. Its *uptime* was almost perfect 99.99%. It's very well above the benchmark level (99.9%). My site hosted with this host was available all the time during the whole month except 4.3 minutes. And the *Satisfactory Apdex* was simply perfect – 100% (all the time the speed was faster than 2.5 seconds, and of course it's much above the highest standards set for great hosting which is 99%). Great performance!

LunarPages took the 5th place. Its average speed was very good (1.71 seconds *full page load time*). The *uptime* was very high 99.96%, which is very much above the benchmark level (99.9%). My site was not available for 17.3 minutes this month. And the host's *Satisfactory Apdex* (99.47%) was well above the highest standards (99%). Awesome performance!

Other hosts could not meet at least one of the benchmarks set for the best hosting. However, the results of some hosts were very close to the benchmarks and pretty good in general.

In this month **A2 Hosting** took the 6th place in the Contest. This month my site was on average as fast as 0.99 seconds which is the fastest among all the hosts this month. But its *uptime* (99.82%) was a bit less than the highest standards for the greatest hosts (99.9%). My site hosted with this host was not available for 1.3 hours this month in total. Its *Satisfactory Apdex* was 99.9% (i.e. 99.9% of the time the full page load time of my website hosted with this host was less than 2.5 seconds). It was superb and much above the highest standards set for the best hosts (99%). If the uptime was two time better then this host would win this Contest. But rules are rules. Failure, but great speed.

In this month **HawkHost** took the 7th place in the Contest. It was on average as fast as 1.12 seconds that is really fast. But its *uptime* (99.79%) was a bit less than the benchmark value set for the great hosts (99.9%). My site hosted with this host was not available during this month for 1.51 hours. And its *Satisfactory Apdex* was brilliant – 99.56% (i.e. 99.56% of all the time full page load time of my website hosted with this host was less than 2.5 seconds). It's very much above the benchmark level set for the great hosts (99%). It would be awesome if the uptime was a bit better.

Veerotech goes to the 8th place. Its 1.22 seconds *full page load time* was brilliant. Its *uptime* (99.89%) was a little bit below the benchmark level which is set for great hosts (99.9%). My site was available all the time during this month except 47.5 minutes. This host had great *Satisfactory Apdex* (99.85% of the time my website hosted with this host was faster than 2.5 seconds). It was much above the benchmark set for the greatest hosts (99%). Impressive results, but the uptime fell a bit below the line.

GeekStorage has got the 9th place this month. It performed as fast as 1.35 seconds which is super fast. Its *uptime* (99.83%) was no bad but a bit below the highest standards level set for the greatest hosts (99.9%). My site hosted with this host was available all the time during this month except 1.22 hours. And the *Satisfactory Apdex* was above the highest standards – 99.13% (99.13% of the time this month the speed was faster than 2.5 seconds). It's above the highest standards (99%). In general it's great but according to the rules of the Contest the host loses in this month.

MochaHost this month took the 10th place. The average *speed* was 1.37 seconds which is astonishingly fast. But its *Satisfactory Apdex* (98.89%) was a little bit less than the highest standards (99%). *Uptime* (99.23%) was not that good and below the highest standards set for the greatest hosts (99.9%). My site hosted with this hosting was not available this month for 5.54 hours. Fast, but not stable performance with not really good uptime.

InMotionHosting took the 11th place with 1.47 seconds *speed*, which is brilliant. And its *uptime* (99.96%) is superb and above the highest standards (99.9%) set for the greatest hosts. My site hosted with this host was not available this month for just 17.3 minutes. Also, it had not bad *Satisfactory Apdex* – 98.24%. It means that 98.24% of the time in this month my testing site was faster than 2.5 seconds in this month. But this is a bit below the highest benchmark (99%) which is set for great hosts. Failed Apdex did not let this host get higher in the rankings.

Squidix took the 12th place this month.. Its *speed* was pretty good (1.6 seconds). But its *uptime* (98.29%) was quite below the benchmark (99.9%). My site was not available for 12.3 hours this month. This host's *Satisfactory Apdex* (99.15%) was great and much above the benchmark level (99%). Because of the failed uptime benchmark test this host did not get higher in the rankings.

Eleven2 took the 13th place. The host had generally very good *speed* (1.61 seconds on average). And it had nearly perfect *uptime* (99.99%) which is much above the highest standards (99.9%). My site hosted with this hosting was just 4.3 minutes offline. But its *Satisfactory Apdex* (97.47%) was below the benchmark (99%). 97.47% of the time the site was slower than 2.5 seconds. Because of not stable speed the host did not get higher in the rankings.

HostWinds got to the 14th place. Its average *speed* (1.79 secs) was generally good. Its *uptime* was 99.95%, which is superb and quite above the benchmark level (99.9%). My site was not available for 21.6 minutes this month. But the host's *Satisfactory Apdex* (96.97%) was below the highest standards (99%). A bit more stable speed performance would take this host much higher in the rankings.

GlowHost went to the last 15th place. This host could not get higher because of its relative slowness. Its *uptime* (99.97%) was amazing, and very much above the benchmark level (99.9%) which is set to determine the greatest hosts. My site was not available for about 13 minutes this month. And the host's *speed* was not very fast (2.5 seconds). And its *Satisfactory Apdex* (66.76%) was the lowest among other hosts, but much better than in the previous months. The loading time of my test website was less than 2.5 seconds 66.76% of the time in this month.

Generally, the competition of the monitored hosts this month was pretty tight as usual, especially among the hosts trying to pass the uptime benchmark levels.

By the way, keep in mind, that for this Contest I pick out the hosts which are considered to be good, great and superb. These hosts are established businesses for many years and some of them are widely recommended in the Internet. So, the idea of this Contest is to determine the best performing hosts from a technical point of view, giving you objective information for making your own decision regarding hosts.

Let's see now the results in tables and charts for more convenience, more information and more insight.

Here's a table view to compare the Hosting Performance Contest results in November 2019:

Host	Place	Load Time	Uptime	Superb Uptime	Apdex-S	Superb Apdex-S
SiteGround	1 (Winner!)	1.06 sec	99.98%	✓	99.95%	✓
MDDHosting	2 (Silver medal)	1.25 sec	99.92%	✓	100.00%	✓

Host	Place	Load Time	Uptime	Superb Uptime	Apdex-S	Superb Apdex-S
GreenGeeks	3 (Bronze medal)	1.39 sec	99.99%	✓	99.95%	✓
StableHost	4	1.42 sec	99.99%	✓	100.00%	✓
LunarPages	5	1.71 sec	99.96%	✓	99.47%	✓
A2Hosting	6	0.99 sec	99.82%	x	99.90%	✓
HawkHost	7	1.12 sec	99.79%	x	99.56%	✓
VeeroTech	8	1.22 sec	99.89%	x	99.85%	✓
GeekStorage	9	1.35 sec	99.83%	x	99.13%	✓
MochaHost	10	1.37 sec	99.23%	x	98.89%	x
InMotionHosting	11	1.47 sec	99.96%	✓	98.24%	x
Squidix	12	1.60 sec	98.29%	x	99.15%	✓
Eleven2	13	1.61 sec	99.99%	✓	97.47%	x
HostWinds	14	1.79 sec	99.95%	✓	96.97%	x
GlowHost	15	2.50 sec	99.97%	✓	66.76%	x

Table column notes:

Place: The place a hosting has won in this Contest (*the less the better*).

Load Time: Average Full Page Load Time (*the less the better*). Checked every 20 minutes.

Uptime: Uptime (*the more the better*). Checked every minute.

Superb Uptime: If Uptime Benchmark (99.9%) passed (*YES is very good*).

Apdex-S: Satisfactory Apdex, i.e. how often a test website on a tested hosting was loading faster than 2.5 sec (*the more the Apdex-S the better*). Checked every 20 minutes.

Superb Apdex-S: If Satisfactory Apdex benchmark (99%) passed (*YES is very good*).

Color areas: *Green* is superb and above the highest standards. The *greener*, the better.

Yellow is good, but below the highest standards. *Orange* is not very good; worse than yellow.

Red is comparatively the worst.

Here's a table with hosting prices:

Host	1 year	2 years	3 years	Min price	Worthy	My review
SiteGround	\$11.95/mo	\$11.95/mo	\$11.95/mo	\$3.95/mo	Yes	Read
MDDHosting	\$5.00/mo	\$4.50/mo	\$4.00/mo	\$4.00/mo	Yes	Read
GreenGeeks	\$9.95/mo	\$9.95/mo	\$9.95/mo	\$3.95/mo	-	-
StableHost	\$4.45/mo	\$3.95/mo	\$3.50/mo	\$1.75/mo	-	-
LunarPages	\$3.95/mo	\$3.95/mo	\$3.95/mo	\$3.95/mo	-	-
A2Hosting	\$8.99/mo	\$7.99/mo	\$7.99/mo	\$3.92/mo	Yes	Read
HawkHost	\$3.99/mo	\$2.99/mo	-	\$2.24/mo	Yes	Read
VeeroTech	\$5.36/mo	\$5.06/mo	\$5.06/mo	\$5.06/mo	Yes	Read
GeekStorage	\$7.99/mo	\$7.99/mo	\$7.99/mo	\$3.19/mo	Yes	Read
MochaHost	\$2.48/mo	\$2.48/mo	\$1.95/mo	\$1.95/mo	-	-
InMotionHosting	\$8.99/mo	\$7.99/mo	-	\$6.39/mo	Under review	-
Squidix	\$6.95/mo	\$6.45/mo	\$5.95/mo	\$2.95/mo	Yes	Read
Eleven2	\$5.06/mo	\$4.46/mo	\$3.57/mo	\$3.57/mo	-	-
HostWinds	\$7.47/mo	\$6.20/mo	\$5.10/mo	\$2.35/mo	-	-
GlowHost	\$6.95/mo	\$4.95/mo	-	\$4.95/mo	-	-

1 year: Regular prices (after the first invoice) for 1-year plan.

2 years: Regular prices (after the first invoice) for 2-year plan.

3 years: Regular prices (after the first invoice) for 3-year plan.

Min Price: The minimum price officially available for the first invoice (can be for 1-year, 2-year or 3-year plan).

Limited-time offers with more discounts are not included in these prices. Check out if there are special offers currently available by visiting the hosting websites.

Worthy: This column contains my recommended hosts. (*Under review* label means that the host performs well or/and has a good potential in winning prizes in the Contest, but I want to have more proved records of its technical and support performance.)

Here's a table with places within pricing categories:

Host	Regular price 1 year	General place	Place (\$0-5/mo)	Place (\$5.01-8/mo)	Place (\$8+/mo)
SiteGround	\$11.95/mo	1 (Winner!)	-	-	1
MDDHosting	\$5.00/mo	2 (Silver medal)	1	-	-
GreenGeeks	\$9.95/mo	3 (Bronze medal)	-	-	2
StableHost	\$4.45/mo	4	2	-	-
LunarPages	\$3.95/mo	5	3	-	-
A2Hosting	\$8.99/mo	6	-	-	3
HawkHost	\$3.99/mo	7	4	-	-
VeeroTech	\$5.36/mo	8	-	1	-
GeekStorage	\$7.99/mo	9	-	2	-
MochaHost	\$2.48/mo	10	5	-	-
InMotionHosting	\$8.99/mo	11	-	-	4
Squidix	\$6.95/mo	12	-	3	-
Eleven2	\$5.06/mo	13	-	4	-
HostWinds	\$7.47/mo	14	-	5	-
GlowHost	\$6.95/mo	15	-	6	-

Since it's not always correct to compare hosts from different price categories together, I've broken down the monitored hosts into three categories to compete within as you can see above in the table.

The prices presented in this table are regular prices (i.e. applied *after* the first invoice). Note that prices for the first invoice (1-,2- or 3-year plan) are usually less (see them in the previous table). And special promo prices are not included (check them out on the hosting websites).

And here are the charts with the Hosting Performance Contest results in November 2019:

Average Full Page Load Time, seconds (the less the better). Checked every 20 minutes.

1. The **golden** medalist: [SiteGround](#) (it's in my [list](#) of the recommended hosts; see [my review](#)).
2. The **silver** medalist: [GeekStorage](#) (it's in my [list](#) of the recommended hosts; see [my review](#)).
3. The **bronze** medalist: [GreenGeeks](#).

By the way, if you want to make your website faster, I suggest looking at [this long read](#) which contains a lot of practical tips (upper-intermediate level). This is the tutorial prepared by [Kinsta](#), one of the fully managed WordPress hosting which I recommend.

Also, [here](#) you can read the analysis of other fully managed WP hosts which I recommend.

Besides, [here's the collection](#) of my own articles which will help you make your website faster.

Uptime, % (the more the better). Checked every minute.

Satisfactory Apdex: how often full page load time was less than 2.5 sec, % (the more the better). Checked every 20 minutes.

November 2019 Hosting Performance Contest Results – Notes

I use monitis.com services for uptime and full page load monitoring. The monitoring is performed from two locations in order to decrease chances of false alerts and make

monitoring results more objective. You can read more about my methodology of monitoring [here](#).

Here are the monthly monitoring reports screenshots:

Uptime Monitors

Monitoring Location: All

November, 2019

Monitor Name	Type	Uptime(%) ¹	Average Response Time (ms) ²	Times Failed from All Locations(#) ³
ResearchAsaHobby.com tests: Site1 (StableHost)	http	99.99	344.18	1
ResearchAsaHobby.com tests: Site10 (InMotionHosting)	http	99.96	472.36	13
ResearchAsaHobby.com tests: Site11 (SiteGround)	http	99.98	279.17	7
ResearchAsaHobby.com tests: Site12 (MochaHost)	http	99.23	510.01	330
ResearchAsaHobby.com tests: Site13 (LunarPages)	http	99.96	442.5	13
ResearchAsaHobby.com tests: Site14 (HostWinds)	http	99.95	665.64	20
ResearchAsaHobby.com tests: Site15 (GreenGeeks)	http	99.99	284.21	2
ResearchAsaHobby.com tests: Site16 (MDDHosting)	http	99.92	333.18	31
ResearchAsaHobby.com tests: Site2 (HawkHost)	http	99.79	212.31	90
ResearchAsaHobby.com tests: Site3 (VeeroTech)	http	99.89	336.55	45

ResearchAsaHobby.com tests: Site8 (Squidix)	http	98.29	673.52	668
ResearchAsaHobby.com tests: Site9 (A2Hosting)	http	99.82	366.6	74

¹ Uptime (%) - If at least one location has returned OK, the All Locations result for the check is assigned OK status. Uptime (%) for a given time interval is calculated as the number of OKs divided over the number of checks.

² Average Response Time (ms) - For each check that has returned OK as the All Locations result, the smallest response time among all locations is determined. Average Response Time for a given time interval is calculated as average of the smallest response times across checks.

³ Times Failed from All Locations (#) - For a given interval the number of times failure was returned by all locations during the check.

These monitor checks are performed with 1-minute interval, which makes it great for detecting website uptime and downtime.

So, we need **Uptime** values from this table for finding the winner of our Contest. By the way, downtime is detected if *server response time (time-to-first-byte)* is more than 10 seconds.

Other values (just for information):

- **Response time** is not that important for this Contest, because I've got a better indicator monitored, which is Full page load time (see below).
- **Number of failures** may be interesting to look at, but this is just an additional information to Uptime, which is more important for the overall hosting evaluation.

Six hosts on the screenshot have not passed the *uptime* benchmark test (99.9%) for the greatest hosting. The other hosts I'm monitoring were up more than **99.9%** in November. The websites on the uptime-failed hosting were not available for more than 43.2 minutes in total this month.

Full Page Load Monitors

Monitoring Location: All

November, 2019

Monitor Name	Avg Test Duration(sec)	Uptime(%)	Failures(#)	Apdex - (S/T/F)
ResearchAsaHobby.com tests: Site1 (StableHost)	1.42	100	0	1 - (100/0/0)
ResearchAsaHobby.com tests: Site2 (HawkHost)	1.12	99.75	5	0.99 - (99.56/0.19/0.24)
ResearchAsaHobby.com tests: Site3 (VeeroTech)	1.22	99.95	1	0.99 - (99.85/0.09/0.04)
ResearchAsaHobby.com tests: Site4 (GlowHost)	2.5	100	0	0.83 - (66.76/33.23/0)
ResearchAsaHobby.com tests: Site6 (Eleven2)	1.61	100	0	0.98 - (97.47/2.31/0.2)
ResearchAsaHobby.com tests: Site7 (GeekStorage)	1.35	99.9	2	0.99 - (99.13/0.76/0.09)
ResearchAsaHobby.com tests: Site8 (Squidix)	1.6	98.25	33	0.99 - (99.15/0.47/0.36)
ResearchAsaHobby.com tests: Site9 (A2Hosting)	0.99	99.95	1	0.99 - (99.9/0.04/0.04)
ResearchAsaHobby.com tests: Site10 (InMotionHosting)	1.47	100	0	0.99 - (98.24/1.75/0)
ResearchAsaHobby.com tests: Site11 (SiteGround)	1.06	100	0	0.99 - (99.95/0.04/0)
ResearchAsaHobby.com tests: Site12 (MochaHost)	1.37	99.32	14	0.99 - (98.89/0.91/0.19)
ResearchAsaHobby.com tests: Site13 (LunarPages)	1.71	100	0	0.99 - (99.47/0.52/0)
ResearchAsaHobby.com tests: Site14 (HostWinds)	1.79	99.9	2	0.98 - (96.97/2.92/0.09)
ResearchAsaHobby.com tests: Site15 (GreenGeeks)	1.39	95.58	92	0.99 - (99.95/0.04/0)
ResearchAsaHobby.com tests: Site16 (MDDHosting)	1.25	99.9	2	1 - (100/0/0)

These tests are performed with 20-minute interval from two locations. It makes it a perfect real-user performance monitor. This monitor's activity is equal to 144 unique visitors per day (about 4,320 unique visitors per month).

Avg Test Duration is the **Full page load time**, which is very clear and important factor for the Hosting Performance Contest.

We don't need *Uptime* from this table because we have got a better (more precise) *Uptime* indicator from the previous table.

Also, we don't need *Failures* from this table, because it's less precise than the same indicator from the previous table.

But we will need *Apdex*, particularly its *S (Satisfactory)* part. This shows how much time (in %) the website loaded *faster than 2.5 seconds*.

Conclusion

The best hosts which have demonstrated the best performance in November 2019 are the medalists: [SiteGround](#), [MDDHosting](#) and [GreenGeeks](#).

By the way, all the top winners have passed the strict benchmarks determined for great hosting!

As regards the winners in different pricing categories, here they are:

The best hosts in the higher pricing category (\$8+/mo) in this month go in the following order: [SiteGround](#), [GreenGeeks](#) and [A2Hosting](#).

The best three hosts in the middle pricing category (\$5.01-8/mo) in this month are [Veerotech](#), [GeekStorage](#) and [Squidix](#).

The best three hosts in the most affordable pricing category (up to \$5/mo) in this month are [MDDHosting](#), [StableHost](#) and [LunaPages](#).

Please note, that I'm using the cheapest plans available on each of the monitored hosts.

It's noticeable as usual that some of the less expensive hosts outperformed hosts from more expensive categories.

And the hero of the Contest this month is [StableHost](#). This is the hosting which was as close as possible to the perfect performance in terms of Uptime and Satisfactory Apdex!
